Geometric Design Guide for Transit Facilities on Highways and Streets – Phase I

Interim Guide

Requested by:

American Association of State Highway and Transportation Officials (AASHTO)

Standing Committee on the Highways

Prepared by:

Chuck Fuhs
Parsons Brinckerhoff
Houston, Texas

July 2002

The information in this report was prepared as part of NCHRP Project 20-7, Task 135, National Cooperative Highway Research Program, Transportation Research Board.
Acknowledgments

This study was requested by the American Association of State Highway and Transportation Officials (AASHTO), and conducted as part of National Cooperative Highway Research Program (NCHRP) Project 20-7, Task 135. The NCHRP is supported by annual voluntary contributions from the state Departments of Transportation. NCHRP Project 20-7 is intended to fund quick response studies on behalf of the AASHTO Standing Committee on Highways.

This Interim Guide was prepared by Parsons Brinckerhoff. Chuck Fuhs was the Principal Investigator for the project. Rob Fellows and David Shelton of Parsons Brinckerhoff, and Steve Schijns of McCormick Rankin International, Ltd. were principal contributors. The work was reviewed and guided by an advisory group whose names are listed in the report: Members of this advisory group provided valuable information and reviewed this Interim Guide. The project was managed by Harvey Berlin, NCHRP Senior Program Officer.

Disclaimer

The opinions and conclusions expressed or implied are those of the research agency that performed the research and are not necessarily those of the Transportation Research Board or its sponsors. This report has not been reviewed or accepted by the Transportation Research Board's Executive Committee or the Governing Board of the National Research Council.

# Table of Contents

1. **Introduction** ................................................................. 1-1  
   1.1. **Purpose and Scope** ................................................. 1-1  
      1.1.1. Audience .................................................. 1-1  
      1.1.2. Organization of the Interim Guide ....................... 1-2  
   1.2. **AASHTO Green Book and Related AASHTO References** ...... 1-2  
      1.2.1. Relationship to Other AASHTO References ............. 1-2  

2. **General Guidelines Common To All Transit Facilities** .... 2-1  
   2.1. **Functional Planning** ............................................. 2-1  
      2.1.1. Regional-Scale Transit/HOV Facilities Planning .......... 2-1  
      2.1.2. Planning HOV Facilities at the Corridor Level ............ 2-3  
      2.1.3. Facility-Based Planning ................................... 2-4  
      2.1.4. Sketch Planning Techniques ................................ 2-5  
      2.1.5. Transit Demand Estimation Techniques .................... 2-7  
      2.1.6. General Design and Cost Factors ......................... 2-8  
      2.1.7. Cost Effectiveness Analysis ................................ 2-8  
   2.2. **Bus Transit Capacity** ........................................... 2-8  
      2.2.1. Introduction ................................................ 2-8  
      2.2.2. Vehicular Capacity of Bus Stops and Loading Areas .... 2-10  
      2.2.3. Vehicular Capacity of Bus Lanes ......................... 2-22  
      2.2.4. Person Capacity of Bus Facilities ....................... 2-26  
   2.3. **Design Controls and Criteria** ................................ 2-32  
      2.3.1. Design Vehicle ............................................. 2-32  
      2.3.2. Design Driver .............................................. 2-36  
      2.3.3. Design Speed .............................................. 2-36  
      2.3.4. Roadway Alignment Geometry .............................. 2-37  
   2.4. **References** .................................................... 2-38  

3. **Design Guidelines for Transit Facilities on Highways** ... 3-1  
   3.1. **General Planning and Design Considerations** ............. 3-1  
      3.1.1. Types of Highway Transit Services and Facilities ....... 3-1  
   3.2. **Transit Vehicle Facilities** .................................. 3-3  
      3.2.1. Lane Treatment Cross Sections and Design Considerations .... 3-3  
      3.2.2. Termination and Access ................................... 3-18  
      3.2.3. Enforcement Provisions ................................... 3-27  
      3.2.4. Transit Specific Signing and Pavement Markings ........ 3-34  
   3.3. **Highway Transit Passenger Facilities** .................... 3-38  
      3.3.1. General Site Considerations ................................ 3-39  
      3.3.2. On-Line Transit Station .................................... 3-46  
      3.3.3. Off-Line Bus Stops ....................................... 3-58  
   3.4. **References** .................................................... 3-65
4. **Design Guidelines for Transit Facilities on Streets** ...... 4-1

4.1. **General Planning And Design Considerations** ................. 4-1
  4.1.1. Types Of On-Street Transit Services and Facilities ............ 4-2
  4.1.2. Planning And Design Process ......................................... 4-2
  4.1.3. Need and Justification for Bus Priority Treatment .............. 4-6
  4.1.4. Selecting Type of Application ......................................... 4-7
  4.1.5. Bus Stop Design Basics .............................................. 4-9

4.2. **Bus Operations in Shared Lanes (Mixed Traffic)** ............. 4-12
  4.2.1. Accommodations For Shared Lane Use ............................. 4-12
  4.2.2. Bus Operations at Intersections .................................... 4-14

4.3. **Bus Lane Design** ................................................................. 4-20
  4.3.1. Bus Use Of Shoulders .................................................... 4-20
  4.3.2. Right (Curb) Lane ......................................................... 4-21
  4.3.3. Inner Lane ................................................................. 4-24
  4.3.4. Left (Median) Lane ....................................................... 4-26
  4.3.5. Right Side or Left Side Contraflow (One Way Street) ......... 4-28
  4.3.6. Median Contraflow (Two Way Street) ............................. 4-30
  4.3.7. Spot Treatments for Bus Priority ................................. 4-31

4.4. **Infrastructure and Practices Related to On-Street Bus Operation** .... 4-32
  4.4.1. Provisions for Bus Lane Enforcement ............................... 4-32
  4.4.2. Signing and Pavement Marking ...................................... 4-33
  4.4.3. Infrastructure Design for Intelligent Transportation Systems .... 4-39

4.5. **References** ........................................................................... 4-43

5. **Off-Line Transit Facilities** ....................................................... 5-1

5.1. **Planning and Design Considerations** ................................. 5-1
  5.1.1. Types of Off-Line Transit Services and Facilities .............. 5-1
  5.1.2. Justification and Need for Off-Line Transit Treatments ...... 5-2
  5.1.3. Demand Estimation ....................................................... 5-2
  5.1.4. Planning and Design Process ......................................... 5-2
  5.1.5. Final (Detail) Design and Construction ........................... 5-4

5.2. **Bus – Passenger Interface Elements** ................................. 5-4
  5.2.1. Bus Circulation & Passenger Loading Areas .................... 5-4
  5.2.2. Public Areas .................................................................... 5-15
  5.2.3. Operational Support Areas ............................................ 5-19
  5.2.4. Security Considerations ................................................ 5-26

5.3. **Parking & Access Elements** .................................................. 5-32
  5.3.1. Separation of Modes ..................................................... 5-32
  5.3.2. Pedestrian and Bicycle Accommodations ........................ 5-32
  5.3.3. Bus Access Requirements .............................................. 5-38
  5.3.4. Private Automobile Parking .......................................... 5-40

5.4. **Community Integration** ........................................................ 5-46
  5.4.1. Integrating Transit Facilities with Adjacent Land Uses ...... 5-46
  5.4.2. Aesthetic Considerations ............................................... 5-50

5.5. **References** ........................................................................... 5-51
